

## AINA Vehicle Charger

The AINA Vehicle Charger is a charging cradle specially designed for AINA PTT Voice Responder users who are looking for a safe and simple way of using their Bluetooth speaker mic while driving.

### KEY BENEFITS

#### DESIGN

Designed for the use in light, medium or heavy duty trucks and construction vehicles, the AINA Vehicle Charger provides a safe and user friendly location for the AINA Voice Responder.

- Simulates the same movement to take out and put back the mic that drivers are used to from old CB radio mics
- Keeps the Voice Responder stable even during heavy vibrations
- Lanyard provides additional safety to recover device when dropped

#### COMPATIBILITY

Compatible with all major mount manufacturers, the AINA Vehicle Charger can easily be installed alongside any tablet or mobile phone holder.

- Use integrated solutions provided by major mount manufacturers
- Use splitter bars to extend your existing tablet mount
- Install directly to the dash
- Use any standard AMPs hole pattern or male 1/4"-20 threaded steel stud
- Connected through a standard 5V male USB connector

#### SOLVING CUSTOMER PROBLEMS

Q: Where do I put my Bluetooth Remote Speaker Mic (RSM) while driving?

A: Place the vehicle charger cradle in a location where you can pick it up without bending or changing your driving position to be compliant with driving regulations.

Q: How can I make sure my RSM is always charged?

A: Don't worry about needing to charge your RSM anymore! It's being charged continuously as soon as you place it into the cradle and will still transmit any incoming communication while charging.

Q: Don't RSM micro-USB ports break over time?

A: Through the charging contacts on the back of the AINA Voice Responder, the micro-USB port is not used anymore which reduces device failure rates significantly.
